### Introduction

This plugin will make you write less HTML in your posts to format text. Instead you can use wiki style markup.

### Function

Following markups can be used:

Markup	Function	Example source	Example result
'''	bold	'''bold text'''	<b>bold text</b>
"	italic	"italic text"	<i>italic text</i>
underline	[[ underlined text ]]	<u>underlined text</u>	<u>underlined text</u>
%%	strike	%%stroken text%%	stroken text
[[	monospaced	[[ monospaced text ]]	monospaced text

FontStyle will preserve preformatted text within <pre> and <code> tags as well as HTML comments in the post (<!%% xxx %%>).

### History

Version: 1.0 – initial

### Compatibility

Tested with WordPress 2.7. Should work on all 2.x versions.

### Installation

Just upload to your wp-content/plugins folder or any subfolder and activate in plugins menu. Use the Markups anywhere you like and need.

### Download
