

Spring Acegi/Security auto-login

2010-01-17 17:40:18

Usefull and thus noted:

In one of my current workprojects I had a registrationform the user filled. After formvalidation, I wanted to login the user automatically. This can be achieved in Spring / Acegi quite easy:

```
User user = createUser(); final RememberMeAuthenticationToken auth = new  
RememberMeAuthenticationToken(webKey, userAccount.getUser(),  
userAccount.getUser().getAuthorities()); auth.setAuthenticated(true);  
SecurityContextHolder.getContext().setAuthentication(auth);  
Also logging user out (after database new creattion or session invalidation):
```

```
SecurityContextHolder.getContext().setAuthentication(null);
```
